

Features and Enhancement

New Modules

Access Log

We have introduced a new Access Log for Ambience to record request durations. Distinct from standard logs, this module updates the original record in real-time rather than creating sequential entries. A typical log entry evolves from an initial ID to including the authenticated user, and finally, the completion status and duration. Common static resources are skipped to save space. (Exclusive to Ambience).

Forum

Forum Module provides a platform within Ambience which enables users to post their questions, initiate discussion and seek technical support.

Ensemble / Agent

- [elx-agent#16] - Ensemble Feature Implementation

CMS

- [cms#67] - CMS Module - New Support for Meta Tags and Favicons Customization
